

DISCOVER EyeLT® - THE REVOLUTION FOR 100% SHARPNESS & CONTRAST.

The Rodenstock Eye Lens Technology sets new standards in the field of made-to-measure lenses. With EyeLT® and Impression® 2 and Multigressiv® lenses it is now possible to exploit 100% of your visual potential.

The key to this is high-precision measurement with the newly developed Rodenstock DNEye® Scanner. It provides a comprehensive individual assessment of your entire visual system, as well as the brightness-dependent changes of the pupils which allows you to use 100% of your visual potential.

The result is particularly evident in progressive lenses, but also with single vision or occupational lenses: Customisation Impression® 2 and Multigressiv® lenses that are tailored to each individual visual point perfectly to your eye. For maximum comfort and best compatibility.
